## News Advisory

The Eunice Police Department has a new software program to manage police records, which will enhance their ability to input and document pertinent information pertaining to an incident as soon it happens. This software builds upon the recently added CAD system provided by the St. Landry Parish Sheriff's Office. "The new software has many different features to generate accurate reports and information, which will bring greater accountability to the police department and accessibility to criminal information", said Parish President Don Menard. The software will stop the duplication of efforts in the paperwork process among Eunice Police Officers because once someone is booked into the system their information can be accessed by other officers. This software will be compatible with the Opelousas Police Department and Parish Sheriff's Department, which will allow for better coordination and information sharing among these agencies. The total cost of the software was \$40,075.00 and was purchased with homeland security grant funds provided to the St. Landry Parish Government Office of Homeland Security & Emergency Preparedness.
